WORK EXPERIENCE

Software Engineer – Remote **FrontStory** **Feb 2022 – May 2026**

- Launched and owned the full development lifecycle of a React Native app for a WordPress news website with ~270K MAU across 20+ production releases on iOS and Android
- Implemented mobile revenue and retention pipelines by integrating Google AdMob and Taboola SDKs, AppsFlyer deep linking, and OneSignal push notification workflows
- Solely maintained a Django campaign creation tool launching 100K+ ads annually across 5 ad platforms
- Leveraged Python multiprocessing to reduce ad creative processing times by 60%, eliminating request timeouts
- Integrated 2 additional ad platform APIs, expanding campaign reach and diversification
- Prototyped a TypeScript rebuild of the Campaign Creator using Serverless Stack Toolkit (SST), AWS, and React in a monorepo, establishing a single source of truth, global type safety, and faster extensibility for new ad platforms
- Enforced data integrity and security via full-stack validation, dynamic React forms with cascading async fields, hierarchical RBAC, and Amazon Cognito authentication

Software Developer – Freelance **5 jobs, ~2 months total effort** **Nov 2020 – Nov 2021**

- Earned "Top Rated" status with 100% Job Success and Client Recommendation scores on Upwork, delivering Python data extraction and API integration tools for multiple clients
- Built a financial analysis system using Google Apps Script for a large-scale content publisher, optimized it under Google Sheets constraints

PROJECTS

Kabsa **C++, Lex, Yacc, Compilers**

- Built a compiler that supports 8 language constructs, detects semantic and syntactic errors, and generates code for a hypothetical stack-based machine

Nabd **React Native, Redux**

- Incorporated internationalization, GPS tracking, and designed most of the user interface scenes and forms for a first-aid emergency assisting app, helping it become a $60K government award finalist

EDUCATION

B.Sc. in Computer Engineering **Cairo University** **Sep 2016 – May 2021**

- **Graduation Project – Project Rev:** Researched, designed, and led a team of 4 to build an audio-interactive personalizable chatbot by fine-tuning and evaluating GPT-2, DialoGPT, and BlenderBot on GCP in PyTorch

TECHNICAL SKILLS

Programming Languages

- JavaScript, TypeScript, C++, Python, SQL

Frameworks & Libraries

- React, React Native, Redux, Django, jQuery, Serverless Stack Toolkit (SST), AWS SDK, AWS CDK

Tools & Services

- Git, GitHub, PyCharm, WebStorm, Visual Studio Code, Cursor
- Amazon Web Services (AWS): DynamoDB, Lambda, S3, Cognito, API Gateway
