WORK EXPERIENCE

Software Engineer – Remote **FrontStory – Tel Aviv** **Feb 2022 – May 2026**

- Owned the full development lifecycle of a React Native app for a WordPress news website with ~270K monthly active users, covering ad monetization, analytics, user engagement flows, and 20+ production releases on iOS and Android
- Solely maintained a Django-based campaign creation tool launching 100K+ ad campaigns annually across 5 Demand-Side Platforms (DSPs)
- Integrated 2 additional DSP APIs, expanding campaign reach and diversification
- Leveraged parallel processing to reduce creatives processing times by 60%, eliminating request timeouts

Software Developer – Freelance **5 jobs, ~2 months total effort** **Nov 2020 – Nov 2021**

- Earned "Top Rated" status with 100% Job Success and Client Recommendation scores on Upwork, delivering Python data extraction and API integration tools for multiple clients
- Built a financial analysis system using Google Apps Script for a large-scale content publisher, optimized it under Google Sheets constraints

PROJECTS

FrontStory Campaign Creator Rebuild **Serverless Stack Toolkit (SST), AWS, React**

- Prototyped an in-house ad campaign creation tool using a TypeScript SST monorepo for serverless scalability, single-source-of-truth, and global type safety
- Designed for data integrity through full-stack data validation, robust exception handling, hierarchical role-based access control, and secure auth flows via Amazon Cognito
- Built a responsive UI featuring dynamic, dependent, and async forms to streamline the campaign creation process
- Structured the codebase for reusability and extensibility to support seamless integration of new ad platforms

Project Rev **PyTorch, Google Cloud Platform (GCP), Natural Language Processing (NLP)**

- Conducted research, designed the architecture, and led a team of 4 in developing a 5-module, audio-interactive, personalizable chatbot

Kabsa **C++, Lex, Yacc, Compilers**

- Built a compiler that supports 8 language constructs, detects semantic and syntactic errors, and generates code for a hypothetical stack-based machine

Nabd **React Native, Redux**

- Incorporated internationalization, GPS tracking, and designed most of the user interface (UI) scenes and forms for a first-aid emergency assisting app, helping it become a $60K government award finalist

EDUCATION

B.Sc. in Computer Engineering **Cairo University** **Sep 2016 – May 2021**

TECHNICAL SKILLS

Programming Languages

- JavaScript, TypeScript, C++, Python, SQL

Frameworks & Libraries

- React, React Native, Redux, Django, jQuery, Serverless Stack Toolkit (SST), AWS SDK, AWS CDK

Tools & Services

- Git, GitHub, PyCharm, WebStorm, Visual Studio Code, Cursor
- Amazon Web Services (AWS): DynamoDB, Lambda, S3, Cognito, API Gateway
