

WORK EXPERIENCE

- | | | |
|--|---------------------------------------|----------------------------|
| Software Engineer – Remote Contract | FrontStory – Tel Aviv | Feb 2022 – May 2026 |
| <ul style="list-style-type: none">Owned the full development lifecycle of a React Native app for a WordPress news website with ~270K monthly active users, covering ad monetization, analytics, user engagement flows, and 20+ production releases on iOS and AndroidMaintained a Django-based campaign creation tool launching 100K+ ad campaigns annually across five Demand-Side Platforms (DSPs)Integrated 2 additional DSP APIs, expanding campaign reach and diversificationLeveraged parallel processing to reduce creatives processing times by 60%, eliminating request timeouts | | |
| Freelance Software Developer | 5 jobs, ~2 months total effort | Nov 2020 – Nov 2021 |
| <ul style="list-style-type: none">Earned “Top Rated” status with 100% Job Success and Client Recommendation scores on Upwork, delivering Python data extraction and API integration tools for multiple clientsBuilt a financial analysis system using Google Apps Script for a large-scale content publisher, optimized it under Google Sheets constraints | | |

PROJECTS

- | | |
|--|--|
| FrontStory Campaign Creator Rebuild | Serverless Stack Toolkit (SST), AWS, React |
| <ul style="list-style-type: none">Re-engineered an in-house ad campaign creation tool using a TypeScript SST monorepo for serverless scalability, single-source-of-truth, and global type safetyEnsured data integrity through full-stack data validation, robust exception handling, hierarchical role-based access control, and secure auth flows via Amazon CognitoDelivered a responsive UI featuring dynamic, dependent, and async forms, streamlining the campaign creation processDesigned for code reusability and extensibility, enabling seamless integration of new ad platforms | |
| Project Rev | PyTorch, Google Cloud Platform (GCP), Natural Language Processing (NLP) |
| <ul style="list-style-type: none">Conducted research, designed the architecture, and led a team of four in developing a five-module, audio-interactive, personalizable chatbot | |
| Kabsa | C++, Lex, Yacc, Compilers |
| <ul style="list-style-type: none">Built a compiler that supports eight language constructs, detects semantic and syntactic errors, and generates code for a hypothetical stack-based machine | |
| Nabd | React Native, Redux |
| <ul style="list-style-type: none">Incorporated internationalization, GPS tracking, and designed most of the user interface (UI) scenes and forms for a first-aid emergency assisting app, helping it become a \$60K government award finalist | |

EDUCATION

- | | | |
|--------------------------------------|-------------------------|----------------------------|
| B.Sc. in Computer Engineering | Cairo University | Sep 2016 – May 2021 |
|--------------------------------------|-------------------------|----------------------------|

TECHNICAL SKILLS

Programming Languages

- JavaScript, TypeScript, C++, Python, SQL

Frameworks & Libraries

- React, React Native, Redux, Django, jQuery, Serverless Stack Toolkit (SST), AWS SDK, AWS CDK

Tools & Services

- Git, GitHub, PyCharm, WebStorm, Visual Studio Code, Cursor
- Amazon Web Services (AWS): DynamoDB, Lambda, S3, Cognito, API Gateway
